PROFESSIONAL SUMMARY

Software Engineer specializing in full stack development, with hands-on experience building production-ready applications using the MERN stack (MongoDB, Express.js, React.js, Node.js) and delivering projects like an AI-powered resume screening platform integrating NLP models. Strengths include OOP, secure REST API design, and modular backend architecture, with a consistent focus on testing and automation to improve reliability. Seeking to contribute as a Full Stack Developer, bringing strong engineering fundamentals and a track record of shipping scalable solutions.

TECHNICAL SKILLS

- **Frontend:** HTML5, CSS3, Tailwind CSS, JavaScript (ES6+), ReactJS
- **Backend & APIs:** RESTful APIs, Authentication & Authorization, Secure System Design, Nodejs, Python
- **Databases:** MongoDB, MSSQL, PostgreSQL, SQLite
- **AI & Automation:** NLP (spaCy), Machine Learning fundamentals, Computer Vision
- **Cloud & Tools:** Google Cloud Console, Git/GitHub, Postman, SonarQube, VS Code
- **Testing:** Jest, Mocha, Chai

EXPERIENCE

MERN Stack Developer Intern — 10Pearls Pakistan

Dec 2025 – Mar 2026

- Developed and maintained a full-stack Notes Management Application using the MERN stack, building secure, scalable REST APIs and responsive UI components to support efficient task tracking.
- Designed and implemented CRUD functionality end-to-end across frontend and backend, improving usability by 40%.
- Performed unit and integration testing (Jest, Mocha, Chai) as part of the development workflow, identifying critical bugs early and reducing production errors by 65%.
- Followed secure coding and version-control best practices (Git) throughout the development lifecycle.

Frontend Developer Intern — Internship Pakistan

Jul 2025 – Oct 2025

- Built responsive, production-facing job listing and application pages using React.js, contributing to a scalable frontend architecture.
- Collaborated with cross-functional teams in an Agile environment, improving team productivity by 20%.
- Participated in code reviews and used Git-based version control workflows, improving code quality and reducing errors by 45%.

PROJECTS

Recruit AI — Final Year Project — Python, MERN Stack, Google Cloud Console, NLP, AI

- Developed an AI-powered resume screening and candidate ranking platform to automate recruitment workflows and reduce manual evaluation effort.
- Annotated custom entity labels on a public Kaggle dataset of 30,000 resumes using Label Studio to build a domain-specific NER training corpus.
- Trained and fine-tuned a custom NER model using spaCy Transformers, achieving 85% accuracy on a held-out test set of 500 resumes across multiple industries.
- Evaluated model performance per entity type using precision, recall, and F1-score to validate extraction reliability.
- Built a FastAPI backend to serve the model, enabling real-time resume parsing within the MERN-based web application.
- Created an entity-aware resume-to-job-description matching system using Sentence Transformers and Cosine Similarity to rank candidate relevance.

Time-Off Microservice with HCM Integration — NestJS, Postman, SQLite, TypeScript

- Developed a modular time-off management microservice using NestJS and TypeORM, handling leave requests, balance validation, and automated approval workflows.
- Designed a fault-tolerant integration layer simulating third-party HCM system connectivity, with fallback mechanisms to handle API failures and maintain data consistency.
- Built a batch synchronization job to periodically reconcile local employee leave balances with the external HCM system.

WorkSphere — Team Collaboration & Management Platform — PostgreSQL, React.js, Passport.js, Tailwind CSS

- Built a full-stack team collaboration platform (PostgreSQL, React.js, Passport.js) supporting project creation, task assignment, and progress tracking across team workflows.
- Designed a modular Express.js backend with RESTful APIs for task CRUD, filtering, and status tracking, following a controller-service-repository pattern for maintainability.
- Implemented secure session-based authentication using Passport.js with PostgreSQL-backed session storage.

EDUCATION

Bachelor of Science in Software Engineering

Iqra University Main Campus, Karachi, Pakistan

2022 – 2026
