PROFESSIONAL SUMMARY

Software Engineer specializing in Full Stack Development with hands-on experience across the MERN stack (MongoDB, Express.js, React.js, Node.js). Built and shipped an AI-powered resume screening platform integrating a custom-trained NLP model, along with production-facing web applications featuring secure REST APIs, authentication systems, and automated testing. Strong fundamentals in OOP, API security, and modular backend architecture; graduating 2026 and seeking a Full Stack Developer role.

TECHNICAL SKILLS

- **Frontend:** HTML5, CSS3, Tailwind CSS, JavaScript (ES6+), React.js
- **Backend & APIs:** Node.js, Express.js, Python, RESTful APIs, JWT & OAuth 2.0, Secure System Design
- **Databases:** MongoDB, PostgreSQL, MSSQL, SQLite
- **AI & Automation:** NLP (spaCy), Machine Learning fundamentals, Computer Vision
- **Tools & Cloud:** Git/GitHub, Postman, Google Cloud Console, SonarQube, VS Code
- **Testing:** Jest, Mocha, Chai

EXPERIENCE

MERN Stack Developer Intern — 10Pearls Pakistan

Dec 2025 – Mar 2026

- Built and maintained a full-stack Notes Management application on the MERN stack, delivering secure REST APIs and responsive UI components for task tracking.
- Implemented end-to-end CRUD functionality across frontend and backend, improving usability by 40%.
- Developed complete authentication and authorization workflows using JWT and OAuth 2.0, including Google Authentication, forgot password, and reset password functionality.
- Tested the system using unit and integration tests (Jest, Mocha, Chai), catching critical bugs in pilot launch.
- Followed secure coding and Git-based version-control practices throughout the development lifecycle.

Frontend Developer Intern — Internship Pakistan

Jul 2025 – Oct 2025

- Built responsive, production-facing job listing and application pages in React.js within a scalable frontend architecture.
- Collaborated in an Agile workflow and code reviews, contributing to a 20% productivity gain and 45% fewer errors.

PROJECTS

TeamDesk — Multi-Tenant Project Management SaaS

MERN Stack · Role-Based Access Control · Modular Backend Architecture

- Built a multi-tenant SaaS platform (MERN) enabling organizations to manage projects, tasks, team members, and roles from a single centralized workspace.
- Implemented organization-level data isolation so each tenant's projects, tasks, and members remain fully separated within shared infrastructure.
- Designed role-based access control (RBAC) to govern permissions across organization admins, project managers, and team members.
- Built a team invitation system allowing admins to invite new members and assign roles within their organization.
- Developed project and task management modules supporting creation, assignment, and status tracking across teams.

AI Resume Screening & Candidate Shortlisting System — Final Year Project

Python · MERN Stack · spaCy · FastAPI · Google Cloud Console

- Built an AI-powered resume screening and candidate-ranking platform to automate recruitment workflows and reduce manual evaluation effort.
- Annotated custom entity labels on a 30,000-resume Kaggle dataset using Label Studio to build a domain-specific NER training corpus.
- Trained and fine-tuned a custom NER model using spaCy Transformers, achieving 85% accuracy on a 500-resume held-out test set across multiple industries.
- Evaluated model performance per entity type using precision, recall, and F1-score to validate extraction reliability.

- Built a FastAPI backend to serve the model, enabling real-time resume parsing within the MERN-based web application.
- Created an entity-aware resume-to-job-description matching system using Sentence Transformers and cosine similarity to rank candidate relevance.

AI Multi-Modal Traffic Intelligence System

Python · Machine Learning · Computer Vision · React.js

- Built an AI-based traffic management and accident-risk prediction system, integrating multiple AI techniques into a single framework.
- Applied computer vision techniques to analyze traffic conditions and detect relevant road and vehicle patterns.
- Built a machine learning component to estimate accident risk from historical accident data.
- Integrated real-time weather analysis to factor environmental conditions into risk assessment.
- Implemented search algorithms to compute and recommend the safest available route given current conditions.

WorkSphere — Team Collaboration Platform

React.js · Node.js · Express · PostgreSQL · Passport.js · Tailwind CSS

- Built a full-stack team task management platform supporting project creation, task assignment, and progress tracking across team workflows.
- Designed protected routes on the frontend to restrict access to authenticated users only.
- Built a modular Express.js backend with RESTful APIs for task CRUD operations, filtering, and status tracking.
- Implemented PostgreSQL-backed session storage for secure, persistent session management.

Time-Off Microservice with HCM Integration

NestJS · TypeScript · TypeORM · SQLite · Postman

- Built a modular time-off management microservice (NestJS, TypeORM) handling leave request creation, validation, and approval workflows.
- Implemented leave balance management to track and validate employee time-off allowances.
- Designed a fault-tolerant integration layer simulating third-party HCM system connectivity, with fallback mechanisms for API failures.
- Built a batch synchronization job to periodically reconcile local employee leave balances with the external HCM system.
- Addressed distributed-systems challenges around maintaining data consistency between the microservice and the external HCM system.

CERTIFICATIONS

Into to Python – **Google**

Software Development – **Datacom**

Software Engineering – **Commonwealth Bank**

EDUCATION

Bachelor of Science in Software Engineering

Iqra University Main Campus, Karachi, Pakistan

2022 – 2026
