PROFESSIONAL SUMMARY

Software Engineer and MERN Stack Developer with proven success in building full-stack web applications using React.js, Node.js, Express.js, and MongoDB. Experienced through software development internships and independent projects involving REST APIs, authentication, authorization, database design, testing, and modular backend architecture. Built production-oriented applications including a multi-tenant SaaS platform and an AI-powered recruitment system. Available for immediate joining.

TECHNICAL SKILLS

- **Frontend:** HTML5, CSS3, JavaScript (ES6+), React.js, Tailwind CSS,
- **Backend:** Node.js, Express.js, Python, REST APIs, FastAPI
- **Databases:** MongoDB, MySQL, PostgreSQL
- **API Integration:** RESTful APIs, CRUD, HTTP Methods, FastAPI
- **System Design:** API Design, Responsive UI, Modular Backend Architecture, CI/CD Pipelines
- **Authentication:** JWT, OAuth2.0, RBAC
- **Tools & Cloud:** Git/GitHub, Postman, VS Code, Chrome DevTools,
- **Testing:** Jest, Mocha, Chai, SonarQube System Report

EXPERIENCE

MERN Stack Developer Intern — 10Pearls Pakistan

Dec 2025 – Mar 2026

- Developed a full-stack Notes Management web application using the MERN stack, implementing 11 core modules including authentication, note creation, updating, deletion, pinning, and password recovery.
- Built a component-based React and Tailwind CSS frontend and developed RESTful APIs using Node.js and Express.js, integrating MongoDB for non-relational data storage.
- Implemented a complete authentication flow covering signup, login, forgot/reset password, **Nodemailer**-based password recovery, and **Google Authentication** using OAuth 2.0, with JWT-based session management and 1-hour token expiration.
- Identified and resolved a **user data-integrity issue** where authenticated sessions could expose previously logged-in user data by implementing token verification middleware to associate requests with the correct authenticated user.
- Established a Git-based feature workflow by creating **feature branches**, raising merge requests for mentor review.
- Created and executed automated frontend and backend test cases using Jest, Mocha, and Chai, and generated a SonarQube system-quality report to evaluate the complete application.
- Participated in weekly mentor follow-up sessions, communicating development progress, discussing technical challenges, and adapting implementation based on feedback.

PROJECTS

AI Resume Screening & Candidate Shortlisting System — Final Year Project

Python · MERN Stack · React.js · FastAPI · JavaScript · TailwindCSS · Transformer LLMs

- Developed a full-stack AI-powered recruitment platform as the primary full-stack developer, implementing frontend, backend, database integration, system architecture, and AI model development.
- Built core recruitment workflows including user authentication, resume uploading, automated resume screening, candidate matching, candidate records, and role-based workflows for HR users and candidates.
- Designed a modular application architecture integrating React.js frontend, RESTful backend APIs, MongoDB, and a FastAPI-based AI processing pipeline** for resume parsing and candidate matching.
- Created and annotated a domain-specific resume dataset using Label Studio, addressing the challenge of inconsistent resume formats and balancing clean and noisy training examples to improve model generalization.
- Trained a custom spaCy Transformer-based NER model for resume entity extraction, achieving 85% accuracy in extracting the required entities from resumes.
- Maintained the project's central Git repository and regularly integrated implementation updates while coordinating with a 3-member team consisting of a full-stack developer, QA member, and documentation member.
- Evaluated model performance per entity type using precision, recall, and F1-score to validate extraction reliability.
- Collaborated with the QA and documentation team members to validate system requirements, document workflows, and maintain system-flow and sequence diagrams throughout development.

TeamDesk — Multi-Tenant Project Management SaaS

React.js · Tailwind CSS · JavaScript · React.js · RBAC

- Built a multi-tenant SaaS platform (MERN) enabling organizations to manage projects, tasks, team members, and roles from a single centralized workspace.
- Developed responsive dashboards and reusable React components for project and task management workflows.
- Integrated frontend workflows with REST APIs for project, task, organization, and user management.
- Developed responsive dashboards and reusable React components for project and task management workflows.
- Implemented role-based access control for organization administrators, project managers, and team members.
- Built a team invitation system allowing admins to invite new members and assign roles within their organization.
- Developed project and task management modules supporting creation, assignment, and status tracking across teams.

WorkSphere — Team Collaboration Platform

React.js · Tailwind CSS · JavaScript · MERN Stack

- Built a full-stack team task-management application using React.js and Node.js.
- Developed protected frontend routes for authenticated users.
- Integrated frontend workflows with REST APIs for project, task, organization, and user management.
- Implemented task creation, assignment, filtering, and status-tracking workflows.
- Built RESTful APIs using Express.js and integrated PostgreSQL for persistent data storage.

TimeOff -Microservice with HCM Integration

Nest.js · TypeScript · TypeORM · Postman · SQLite

Built a full-stack team task-management application using React.js and Node.js.

- Developed protected frontend routes for authenticated users.
- Integrated frontend workflows with REST APIs for project, task, organization, and user management.
- Implemented task creation, assignment, filtering, and status-tracking workflows.
- Built RESTful APIs using Express.js and integrated PostgreSQL for persistent data storage.

EDUCATION

Bachelor of Science in Software Engineering

2022 – 2026

Iqra University Main Campus, Karachi, Pakistan

CGPA: 3.42
