PROFESSIONAL SUMMARY

MERN Stack Developer with 1.5+ years of hands-on experience building production-ready, scalable applications using (MongoDB, Express.js, React.js, Node.js). Experienced in designing secure REST APIs, implementing authentication and authorization, and developing modular application architectures. Delivered an AI-powered resume screening platform integrating NLP models to automate manual evaluation workflows, reflecting a consistent focus on using AI and automation to reduce manual effort and improve operational efficiency.

TECHNICAL SKILLS

- **Frontend:** HTML5, CSS3, Tailwind CSS, JavaScript (ES6+), ReactJS
- **Backend & APIs:** REST API Design, Authentication & Authorization, Secure System Design, Nodejs, Python
- **Databases:** MongoDB, MSSQL, PostgreSQL, SQLite
- **AI & Automation:** NLP (spaCy), Machine Learning fundamentals, Computer Vision,
- **Cloud & Tools:** Google Cloud Console, Git/GitHub, Postman, SonarQube, VS Code
- **Testing:** Jest, Mocha, Chai

EXPERIENCE

MERN Stack Developer Intern — 10Pearls Pakistan

Dec 2025 – Mar 2026

- Developed and maintained a full-stack Notes Management Application using the MERN stack, building secure, scalable REST APIs and responsive UI components to support efficient task tracking.
- Designed and implemented CRUD functionality end-to-end across frontend and backend, improving usability by 40%.
- Performed unit and integration testing (Jest, Mocha, Chai) as part of the development workflow, identifying critical bugs early and reducing production errors by 65%.
- Followed secure coding and version-control best practices (Git) throughout the development lifecycle.

Frontend Developer Intern — Internship Pakistan

Jul 2025 – Oct 2025

- Built responsive, production-facing job listing and application pages using React.js, contributing to a scalable frontend architecture.
- Collaborated with cross-functional teams in an Agile environment, improving team productivity by 20%.
- Participated in code reviews and used Git-based version control workflows, improving code quality and reducing errors by 45%.

PROJECTS

Recruit AI — Final Year Project — Python, MERN Stack, Google Cloud Console, NLP, AI

- Developed an AI-powered resume screening and candidate ranking platform to automate recruitment workflows and reduce manual evaluation effort.
- Trained and integrated a custom Named Entity Recognition (NER) model using spaCy Transformers to extract structured candidate information from unstructured resumes achieving a model accuracy of 85%.
- Engineered a resume to job-description matching system using Sentence Transformers and Cosine Similarity to identify candidate relevance and improve screening efficiency.
- Collaborated in an Agile development environment with regular code reviews, sprint discussions, and team-based delivery.

Time-Off Microservice with HCM Integration — NestJS, Postman, SQLite, TypeScript

- Developed a modular backend service for employee time-off management, handling leave requests, balance validation, and automated approval decisions.
- Implemented simulated HCM system integration with fault-tolerant fallback mechanisms and batch synchronization, mirroring real-world third-party integration patterns.
- Designed a modular NestJS microservice architecture using TypeORM and SQLite, prioritizing scalable, maintainable backend design.
- Developed batch synchronization functionality to update local employee leave balances maintaining consistency with external systems.
- Applied backend engineering principles including separation of concerns, error handling, data and scalable service design.

WorkSphere — Team Collaboration & Task Management Platform — PostgreSQL, React.js, Passport.js, Tailwind CSS

- Developed a full-stack collaboration platform enabling teams to create projects, assign tasks, track progress, and manage team workflows through an intuitive dashboard.
- Designed and implemented a scalable backend architecture using Node.js and Express.js with modular controllers and database integration.
- Developed RESTful APIs for task management, and team operations including CRUD functionality, filtering, and status tracking.
- Implemented secure session-based authentication using Passport.js, Express Sessions, PostgreSQL session storage and protected API routes.

EDUCATION

Bachelor of Science in Software Engineering

Iqra University Main Campus, Karachi, Pakistan

2022 – 2026
